USER GUIDE

Payroll Processing Guide

From company setup and attendance capture to generating and exporting employee payslips.

ABIC ERP · HR Records, Timesheets and HR Payroll modules
Version 1.0

1. Overview

Payslips are produced from three connected sources of information. Each must be complete for the month before a payslip is generated.

1. Company & Staff	2. Attendance	3. Payroll Setup	4. Monthly Run	5. Payslip
HR Records	Fingerprint or Excel	One time	Sync & calculate	Review, close, export

> **Key principle.** A payslip is a snapshot taken at the moment it is created. If any underlying data changes afterwards, delete the payslip and create it again.

2. Company and Staff Setup (HR Records)

2.1 Departments and positions

1. Open **Setup** → **Departments** and add each department.
2. Add the job positions used by the company in HR Records.

2.2 Staff records

1. Open **HR Records** → **Staff** → **New**.
2. Enter the name, email, department, position and staff code.
3. Note the **Staff ID**. Excel imports and fingerprint devices match employees using this ID.
4. If a fingerprint device is used, also enter the employee's device code.

2.3 Salary and allowance types

1. In **HR Records** → **Settings**, add every **Salary type** (for example Basic Salary).
2. Add every **Allowance type** (for example Housing Allowance).

2.4 Employee contracts

Salary amounts are taken from each employee's contract. Create one contract per employee with:

Field	Requirement
Start date	On or before the first day of the payroll month.
Status	Valid. No end date, or an end date after the payroll month.
Salary and allowance amounts	Enter an amount for each salary and allowance type that applies.

3. Timesheet Setup

3.1 Shift types

1. Open **Timesheets** → **Settings** → **Shift**.
2. Create the working shift (for example 09:00 to 17:00, with lunch break times if applicable).
3. Create an **OFF** shift for rest days.

3.2 Work shift schedule

1. Open **Timesheets → Work shift** and create a schedule that covers the whole payroll period.
2. Assign it to specific staff, a department, or everyone.
3. For each weekday, choose the working shift or the OFF shift.

> **Important.** Every employee must have a shift for every date attendance is recorded. Without a shift, check-ins are stored but no timesheet entry is created.

3.3 Holidays and leave types

Add public holidays and leave types if the company uses them.

4. Capturing Attendance

Choose one of the two methods below.

Option A: Fingerprint device (ZKBio Time)

1. Open **Timesheets → Settings → ZKBio Time integration** and enter the server host, port, username and password.
2. Synchronise employees from the device and match each to the corresponding staff record.
3. Synchronise the attendance transactions (check-ins and check-outs).
4. Open **Timesheets → Timekeeping** for the month and confirm working days show a value.

Option B: Excel import

1. Open **Timesheets → Timekeeping → Import timesheets** and select **Download sample** at the top of the window.
2. Complete one row per employee per day:

Column	Format	Example
Staff ID	Number	1
Time in	Y-m-d H:i:s	2026-08-02 09:00:00
Time out	Y-m-d H:i:s	2026-08-02 17:00:00

3. Upload the file. The system creates check-ins and timesheet entries.
4. Open **Timekeeping** for the month and confirm the days are filled.

5. Payroll Setup (one time)

1. **Data integration.** Open **Payroll → Settings → Data integration**. Enable **HR Records** and **Timesheets**. Set the standard working time of the month, and choose which timesheet types count as actual working days, paid leave and unpaid leave. Save.
2. **Earnings list.** Open **Payroll → Settings → Earnings list (HR Records)** and select **Data synchronization**. Repeat whenever a salary or allowance type is added.
3. **Payroll columns.** In **Payroll → Settings → Payroll columns**, create the columns for the salary and allowance types.
4. **Payslip template.** Open **Payroll → Payslip templates → New**. Select the columns, enter the calculation formulas (Gross Pay, Total Deductions, Total Insurance, Net Pay, Total Cost) and choose which employees the template applies to.
5. **PDF payslip template.** Open **Payroll → Settings → PDF Payslip Templates → New**, choose the payslip template and design the layout that employees will receive.

Result	Typical formula (by column name)
Gross Pay	Salary of formal contract + Allowance
Total Deductions	Total Insurance + Personal Income Tax
Net Pay	Gross Pay − Total Deductions

6. Monthly Payroll Run

Complete these steps in order for each month.

#	Step	Action
1	**Attendance** Payroll → Attendance	Select the month, choose **Data synchronization**, then **Save**. Confirm Standard and Actual working time contain values.
2	**Leaves & Overtime** Timesheet Leaves & Overtimes	Select the month, choose **Attendance calculation**, then **Save**. Return to Attendance, choose **Attendance calculation** and **Save** again.
3	**Employees** Payroll → Employees	Select the month, choose **Data synchronization**, then **Save**. This brings in each contract's salary and allowance.
4	**Create payslip** Payroll → Payslips → New	Enter the name (for example Aug-2026), the month, the payslip template, the PDF template and the currency, then create.
5	**Review**	Check Standard, Actual, Gross and Net Pay for every employee. If a figure is wrong, correct the source data, delete the payslip and create it again.
6	**Close**	Use **Payslip closing** to lock the payslip and save its details.
7	**Export**	Select **Export PDF**. The system produces one PDF per employee and downloads them as a single ZIP file.

> **Tip.** Complete steps 1 to 3 before creating the payslip. Creating it earlier produces zero values that must be regenerated.

7. Troubleshooting

Symptom	Likely cause and remedy
Standard time shows, Actual time is 0	The **Employees** synchronisation has not been done for that month. Run it, then recreate the payslip.
All values are 0	Attendance has not been synchronised and saved for that month.
Gross and Net Pay are 0	No valid contract for the month, or the template has no salary columns or formulas.
Timekeeping shows only off days	No shift is assigned to the staff for those dates.
Check-ins exist but no timesheet entry	The employee has no shift on that date. Assign a shift and import again.
Overtime is 0	Overtime is calculated from approved overtime requests in Timesheets. Enter and approve the overtime, then repeat the Leaves & Overtimes calculation.
Salary type is missing on the payslip	Run **Earnings list** → **Data synchronization** and add the type as a column in the payslip template.

8. Pre-Payroll Checklist

	Confirm before creating the payslip
☐	All staff exist in HR Records with the correct Staff ID and department.
☐	Every employee has a valid contract covering the month, with salary and allowance amounts.
☐	A shift schedule covers every working date for every employee.
☐	Attendance for the month is imported or synchronised and visible in Timekeeping.
☐	Payroll Attendance and Employees are synchronised and saved for the month.
☐	The payslip template formulas and the PDF template are in place.
